DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments filed 8/23/2006 have been fully considered but they are not persuasive. Applicant argued that Williams (US 6,214,016) fails to anticipate claims 1, 2, 5-11, 14, 17, and 18 because, when read in light of the specification, the claimed subject matter differs from Williams because the tube and inner core of the claimed subject matter is unitary and the analogous elements of Williams are movable in relation to each other. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a tube and inner core which are not movable in relation to each other) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
- 2. In regards to claim 13, Applicant argued that Williams is silent in respect to a prestressed core, and that pre-stressed requires that the element operate on the compression side of the stress-strain curve. Based on the presented arguments, Examiner maintains the position that Williams' element is inherently "pre-stressed" to assume a straight configuration, and when the stress-applicator is removed, the element assumes a curved configuration. Alternatively, it is well known in the art of catheterization to do so. The limitation of "operating on the compression side of the stress-strain curve" will not be imported from the specification into the claim language.

Art Unit: 3762

3762

Although "special definitions" may be stipulated in the specification, the excerpt from paragraph 46 of the specification is non-limiting (i.e. "permit it to operate on the compression side") and not presented as a "special definition". As such, Examiner is obligated to interpret the term "pre-stressed" as it is commonly used (i.e. had a force applied (compressive, tensile, or any other force) before some other event).

3. In response to applicant's argument that Stoy's and Williams' inventions are not compatible, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Kahelin whose telephone number is (571) 272-8688. The examiner can normally be reached on M-F, 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on (571) 272-4955. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
